CLASS:

DATE:

Hello, Ace!

With a passion for hunting in the wilds and honing your shooting skills, you are an excellent marksman who never misses. Knowledgeable in hunting strategies, wild game, vital shots, and firing position, you will be a great team player in the **Hunter Safety Quiz Bowl**. It is your job to help your team shoot for the gold and rock the questions about hunting and shooting.

To prepare yourselves for the Hunter Safety Quiz Bowl, your team will assemble a study guide filled with hunter safety tips. Your team may use your study guide anytime during the quiz bowl to solve questions and become champions of hunter safety. So the more you research and organize your study guide, the more likely your team will succeed. The team who solves the most answers first will be the victor!

Consider researching about the following hunting and shooting topics to create a brilliant study guide for the quiz bowl:

- Begin your research by visiting: <https://www.hunter-ed.com/national/> and clicking the "Study Guide" tab button.
- What is good marksmanship?
- How does a hunter know their accuracy limits?
- What are the four main firing positions?
- What is sight alignment?
- How do you determine your dominant eye?
- What is a choke? And how do you match it to your quarry?
- What is the difference between squeezing and pulling the trigger?
- How should hunters prepare for their hunting trip?
- What animal characteristics should hunters know about their animals?
- Choose an animal to hunt. Research those characteristics about the animal.

- What are the different hunting techniques that hunters can use to pursue their wild game?
- What is a vital shot?
- Why do hunters strive for a clean shot?
- How do the angles of the animal to the hunter matter?
- How does a hunter trail wounded game?
- How does a hunter approach a downed animal?
- How does wild game meat spoil?

Discuss your findings with your other team mates. As a group, create a **study guide** that will help your team answer questions in the Hunter Safety Quiz Bowl. Be creative with your study guide and include drawings, diagrams, paper cut-outs, organization tabs, color coding, an index, and more! Anything to make your team understand the material better. And remember: the more information and time your group takes to organize the material in your study guide, the more likely you will be able to remember or find answers during the challenge.

Best of luck to your team!
