

Archery 4 College Worksheet

Student Name:

Class:

Date:

Welcome to the **Archery 4 College** group. Your job is to research, decode and present the steps in earning college scholarships and possibly getting involved in collegiate archery competition.

The members of your group will research and prepare a 5-minute presentation on the steps and realistic pathways to earning college scholarships. Include research about the details of equipment, targets, rules and the different national organizations that offer support and pathways. Select two members from your group to make the presentation to the class in Session 3. Your presentation should be supported by factual research and/or evidence, and presented with at least one form of art or media prepared by the group (either video, poster, graphs, charts, images). Conclude your presentation with the personal rewards and why members of your class might want to get involved in collegiate archery.

Your goal is twofold: 1) present your interesting research in a logical order, and, 2) present clear and realistic pathways for students to pursue collegiate archery.

On a separate sheet of paper or on your computer, develop your presentation that includes the above assignment and:

- What are the programs that can help an archer earn college scholarships?
- What are some of the noted colleges that have collegiate archery programs?
- What are the scholastic and related perks of being on a college archery team?
- What are the steps in creating a high school or college archery team?
