

Clay Targets 4 College Worksheet

Student Name:

Class:

Date:

Welcome to the **Clay Targets 4 College** group. Your job is to research, decode and present the steps in earning college scholarships and possibly getting involved in collegiate clay target competition.

The members of your group will research and prepare a 6-minute presentation on the steps and realistic pathways to earning clay target college scholarships. Include research about the details of equipment, targets, safety, rules and the different national organizations that offer support and pathways. Select two members from your group to make the presentation to the class in Session 3. Your presentation should be supported by factual research and/or evidence, and presented with at least one form of art or media prepared by the group (either video, poster, graphs, charts, images). Conclude your presentation with the personal rewards and why members of your class might want to get involved in a collegiate clay target club or team.

Your goal is twofold: 1) present your interesting research in a logical order, and, 2) present clear and realistic pathways for students to pursue collegiate clay target programs.

On a separate sheet of paper or on your computer, develop your presentations that include the above assignment and:

- What programs can help someone get a clay target college scholarship?
- What types of clay target competitions are part of collegiate programs?
- What are some of the noted colleges that have collegiate clay target programs?
- What are the steps in creating a high school or college clay target team?
